

The Ingredients.... Science doesn't even come close!

It took thousands of years and over 700 herbs, plants and flowers to create a substance so complex that science even come close! The following contains a general analysis of the Neydharting Moor, showing the naturally occurring vitamins, and trace elements which are contained in the Moor. A brief listing of some of the naturally occurring recognised herbs and the physical symptoms or areas of the body which they are traditionally recognised to help with is included on this page [here](#). The Moor is the only 100% naturally occurring substance which contains this extensive range of beneficial vitamins, trace elements, herbs and other compounds.
